

Hello Qunee

按照传统，首先介绍"Hello world"示例，Qunee的入门示例是创建两个节点和一条连线，代码如下：

```
<!DOCTYPE html>
<html>
<head>
  <title>Hello Qunee for HTML5</title>
  <meta charset="utf-8">
</head>
<body>
<div style="height: 500px;" id="canvas"/>
<script src="http://demo.qunee.com/lib/qunee-min.js"></script>
<script>
  var graph = new Q.Graph('canvas');
  var hello = graph.createNode("Hello", -100, -50);
  var qunee = graph.createNode("Qunee", 100, 50);
  var edge = graph.createEdge("Hello\nQunee", hello, qunee);
</script>
</body>
</html>
```

⚠ HTML5中定义了简化了html文件的类型申明，只需要写明<!DOCTYPE HTML>

运行界面

Hello Qunee
